

# Linux App Ecosystem

A survival guide for Windows refugees on Linux, with a focus on preserving compatibility, muscle memory and ease of use.

```
$ sudo switch-to-linux --now
```

# 1. Office & Docs

---

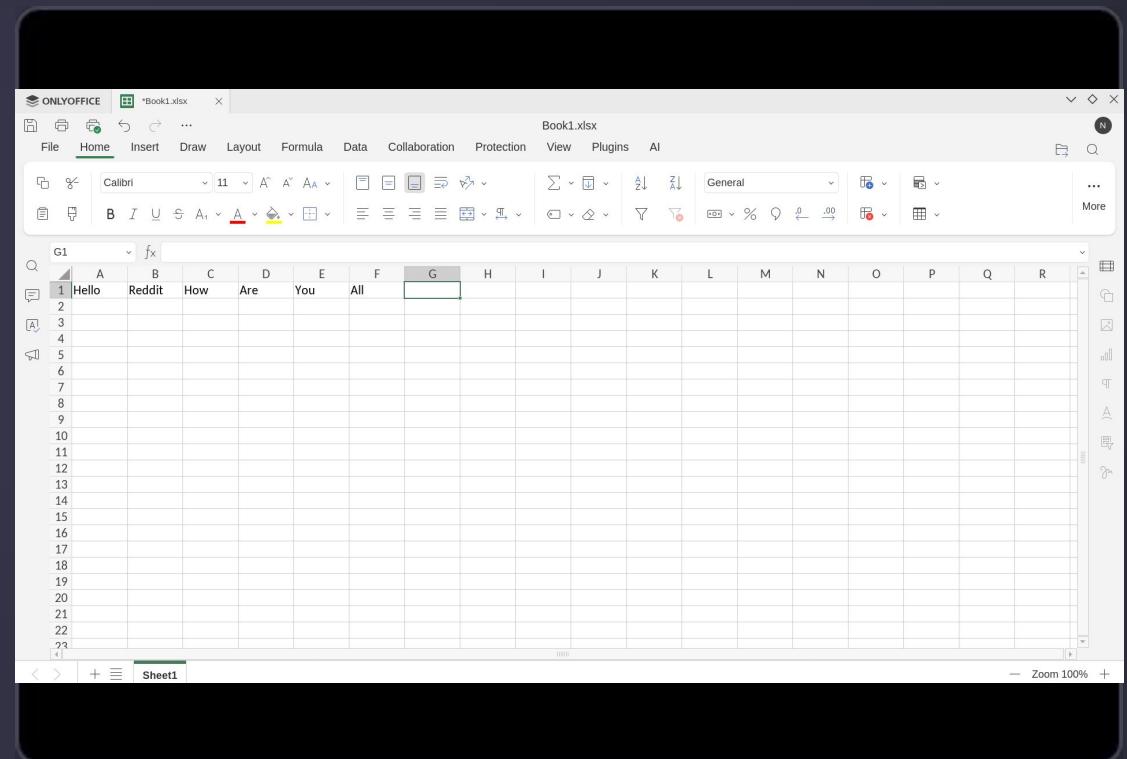

Because spreadsheets happen.

# ONLYOFFICE

---

## The Microsoft Bridge

- > **Best Compatibility:** Opens .docx, .pptx and .xlsx without destroying formatting. Better compatibility than LibreOffice (imo).
- > **Clean UI:** Ribbon interface that feels like Office 365.
- > **No Ads:** Free desktop and mobile apps. Also has online support if you really need it.

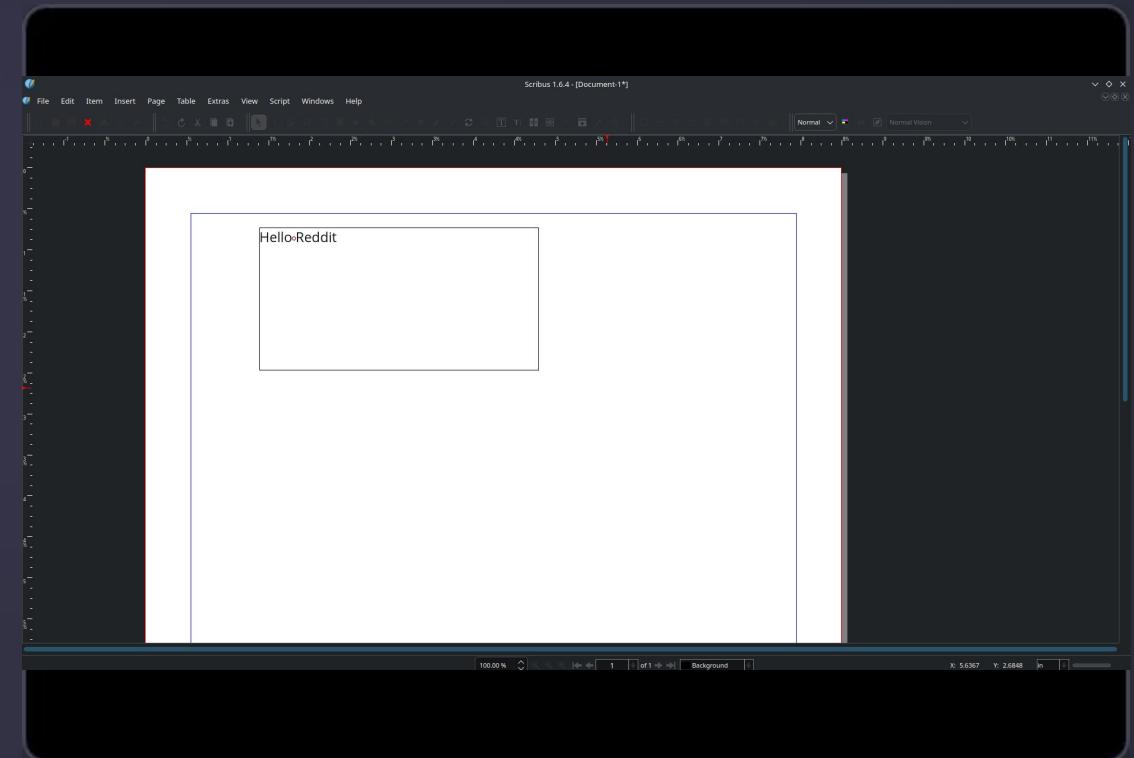

# Scribus

---

## Professional Publishing

- > **Layout Powerhouse:** Open-source answer to InDesign.
- > **Print Ready:** CMYK and ICC color management.
- > **Use Case:** Brochures, magazines, and PDFs.

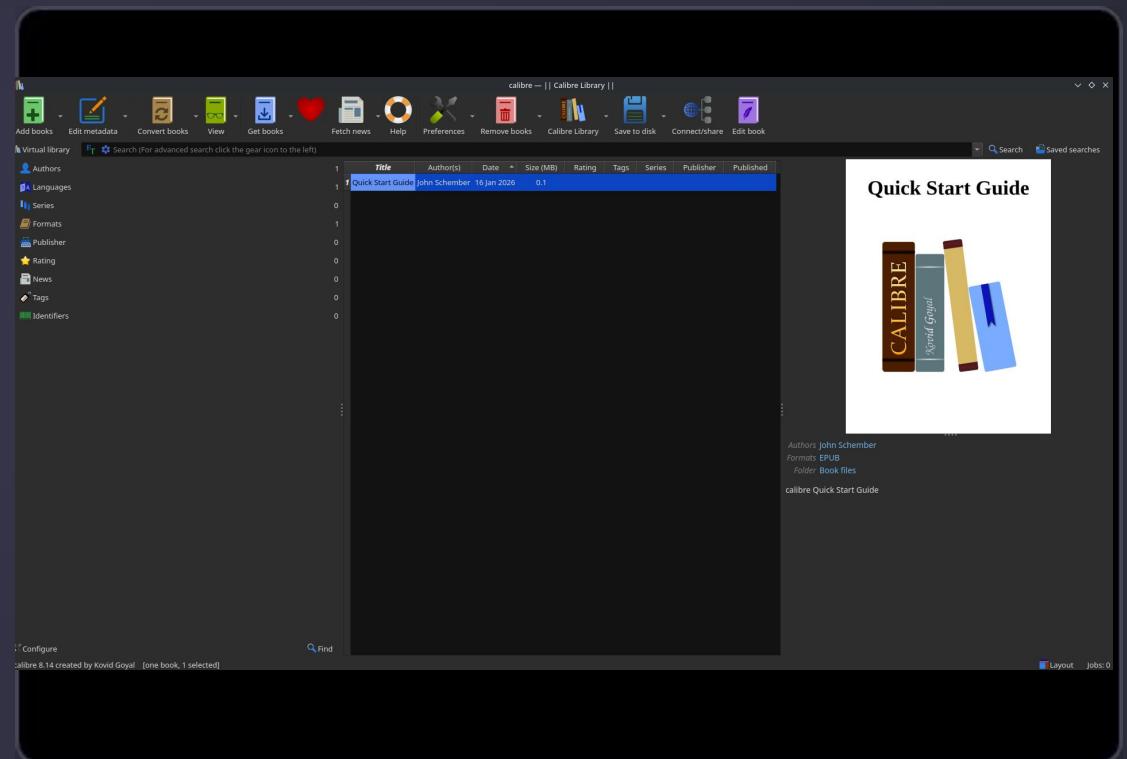

# Calibre

---

## Library Management

- > **Manage Books:** Calibre is a one of a kind app helping you manage your pdfs,epubs, mobi's and comic books...
- > **Tons of Functionality:** Not just read them, but also edit, convert and lots of other utilities...

## **2. Mail, Calendar & Password Manager**

# Proton Suite

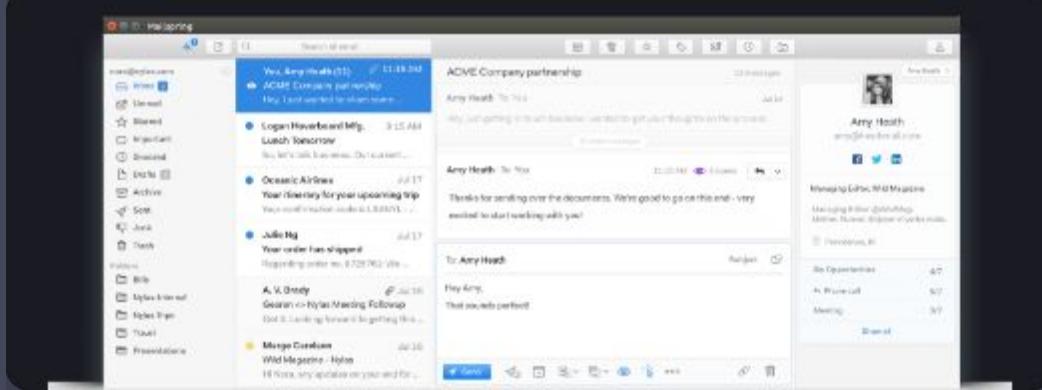

---

## Encrypted Lifestyle

- > **Web-First:** Seamless sync across devices. Avoids the hassle of syncing and self hosting of these things.
- > **Secure:** End-to-end encrypted email, calendar, and password manager.

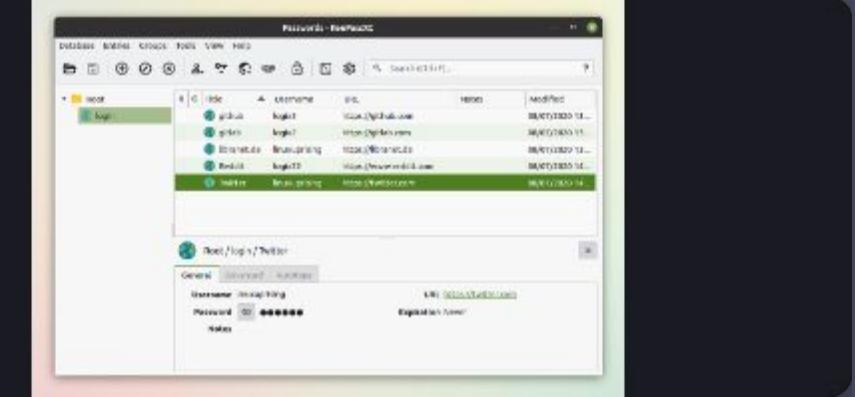

# Local Desktop Powerhouses

## MailSpring

Modern, unified inbox supporting Gmail & Outlook.

## KeePassXC

Offline-first password management. You hold the keys.

I personally don't use them because it just doesn't work for me... the hassle in syncing the password manager for example, just doesn't feel worth it...

# 3. Utilities

---

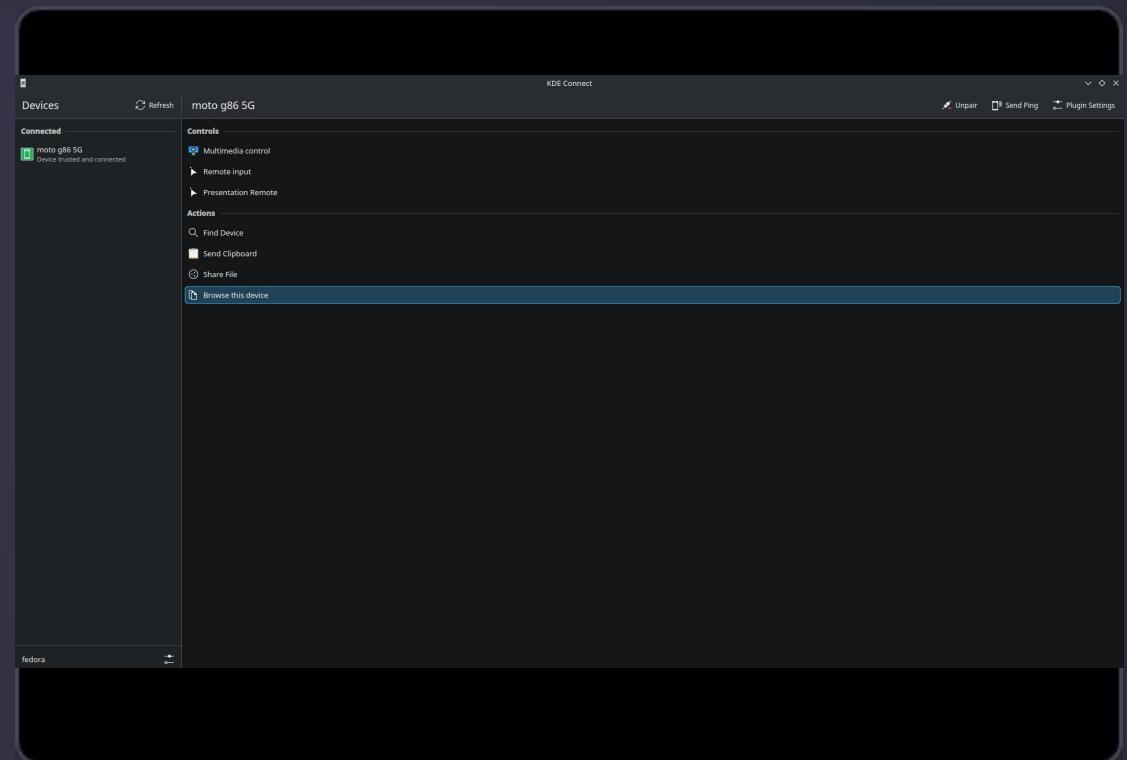

Making life easier.

# KDE Connect

---

## Seamless Integration

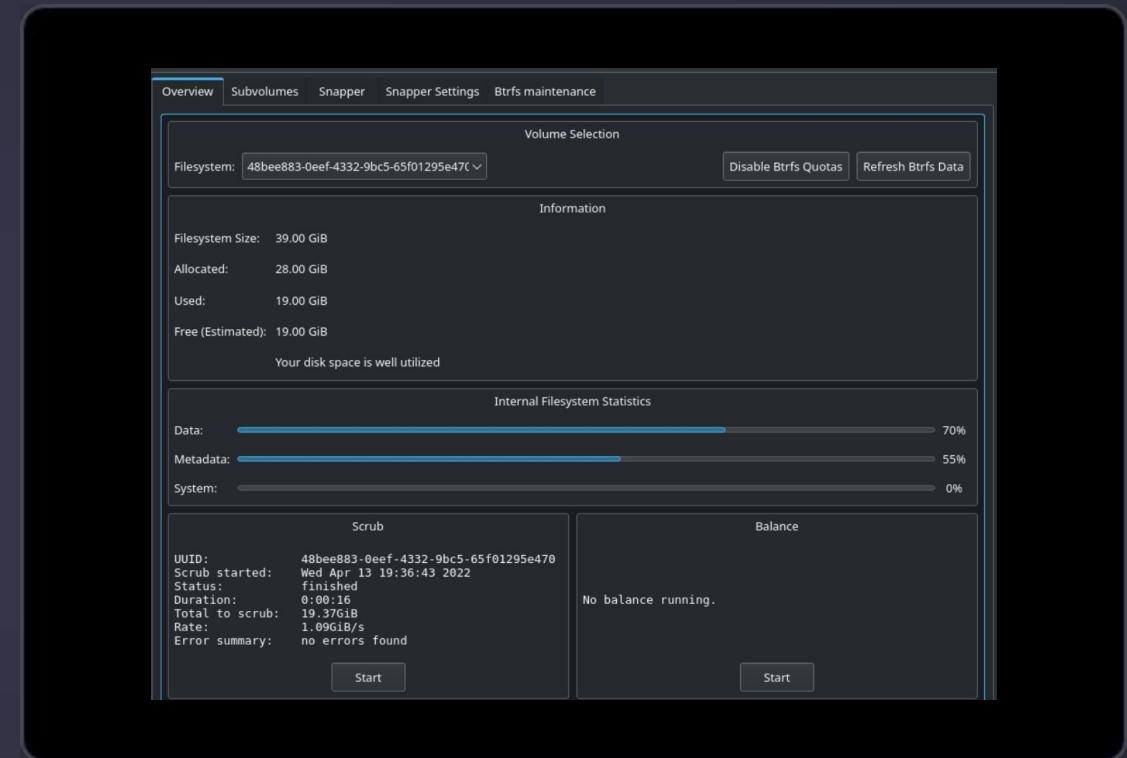

- > **Magic Sync:** Connects phone and desktop over Wi-Fi.
- > **Remote Input:** Use phone as a trackpad.
- > **Clipboard:** Universal copy-paste across devices.

# Btrfs Assistant

## System Recovery Simplified

- > **Magical Restore:** Benefits from BTRFS disk format and helps in recovery.
- > **Avoids Disaster:** Things will break, now or 5 years down the line, that's normal for semi rolling release distros like this. Better safe than sorry.

I personally don't know why something like this doesn't nudge you during the installation process or during even the post-install welcome screens...! I like the way how OpenSUSE handles this, and absolutely hated the hoops Fedora requires to get an actual working recovery system. Insane! Ubuntu/Linux Mint at least has TimeShift absolutely working properly. End Rant.

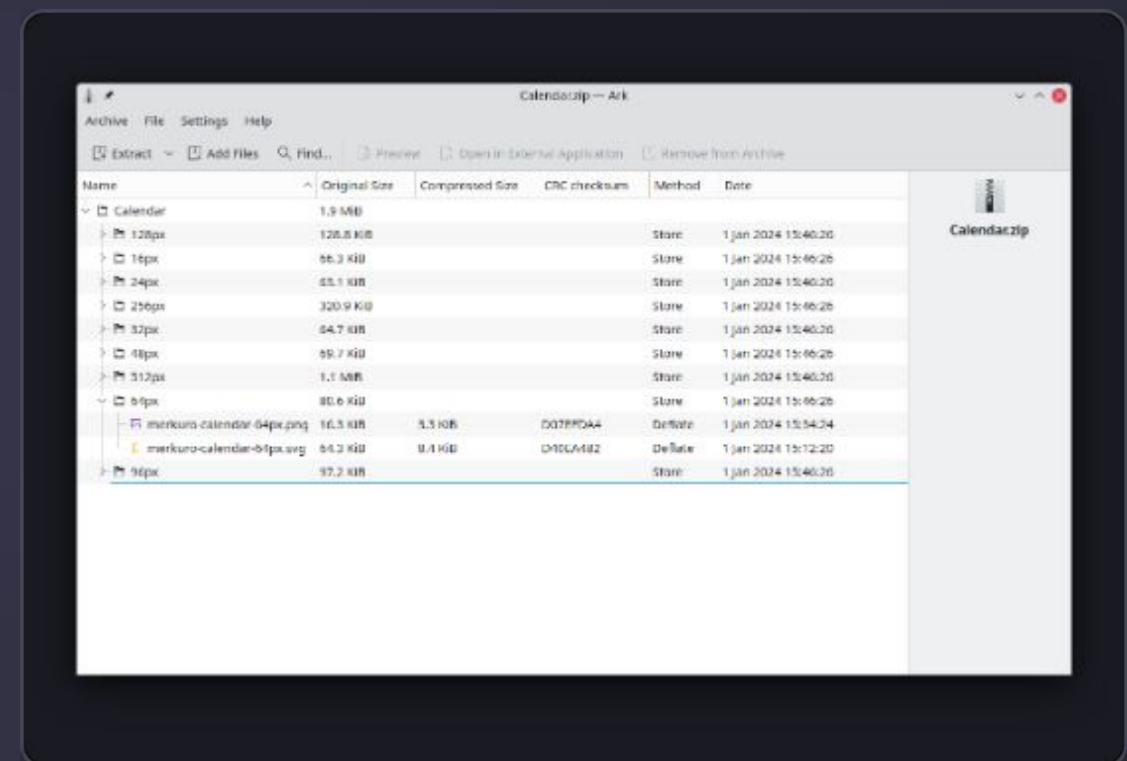

Note: If you are using Ubuntu/Mint, use Timeshift.

# Ark

---

## Archive Manager

- > **Universal:** Supports zip, tar, 7z, rar.
- > **Integrated:** Baked right into the Dolphin file manager.
- > **Fast:** Lightweight and simple for quick extractions.

# 4. Text & Knowledge

---

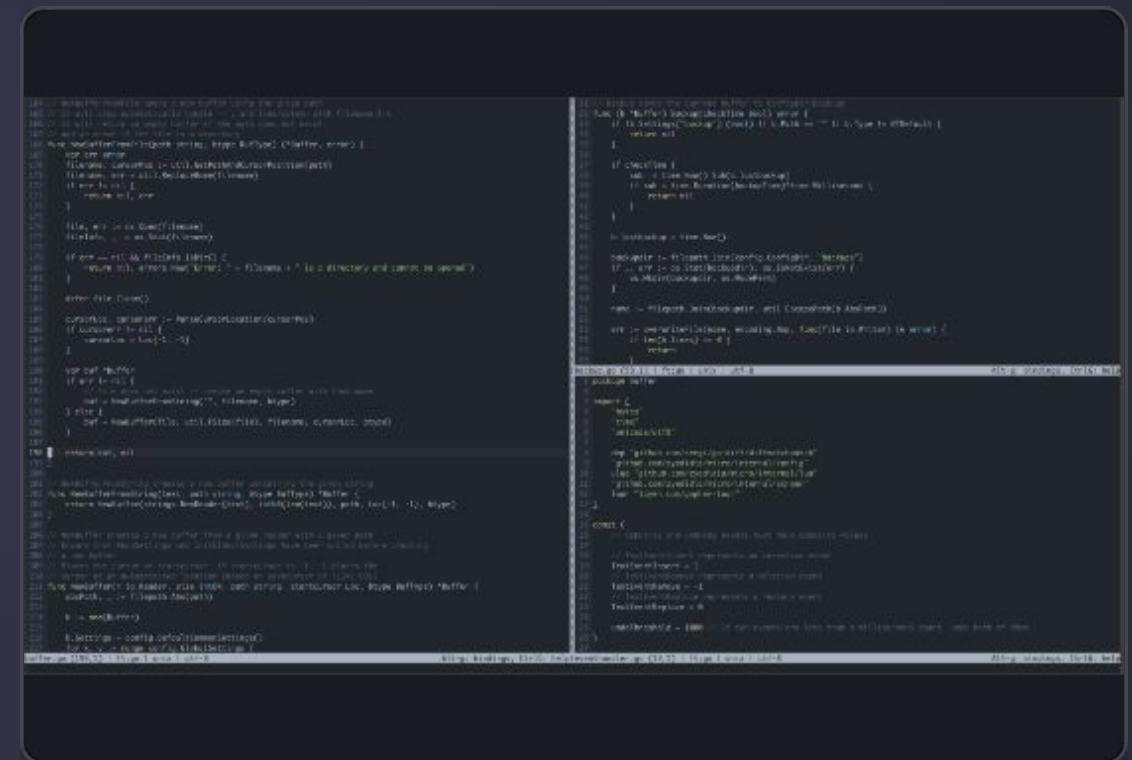

Write it down.

# Micro

---

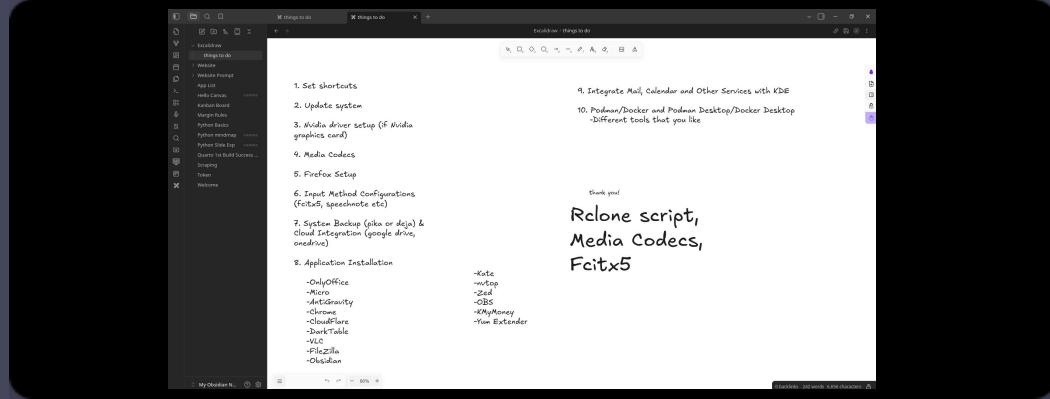

## Terminal Text Editor

- > **Human Friendly:** Standard hotkeys (Ctrl+C/V) in a terminal.
- > **Mouse Support:** Click to move cursor, scroll to scroll.
- > **No Learning Curve:** Easier than Vim, more powerful and simpler than Nano as no new shortcuts would need to be memorized.

The screenshot shows the Micro text editor running in a terminal window. The interface is designed to look like a modern code editor, featuring a top navigation bar with tabs for 'File', 'Edit', 'Search', 'View', 'Help', and 'About'. Below the tabs is a toolbar with icons for file operations like 'New', 'Open', 'Save', 'Copy', 'Paste', 'Find', 'Replace', and 'Select All'. The main area is a large text editor with syntax highlighting for various programming languages. It displays several tabs of code, including C/C++, Python, and JSON. The code includes comments, variables, and functions. A status bar at the bottom provides information about the current file and editor settings.

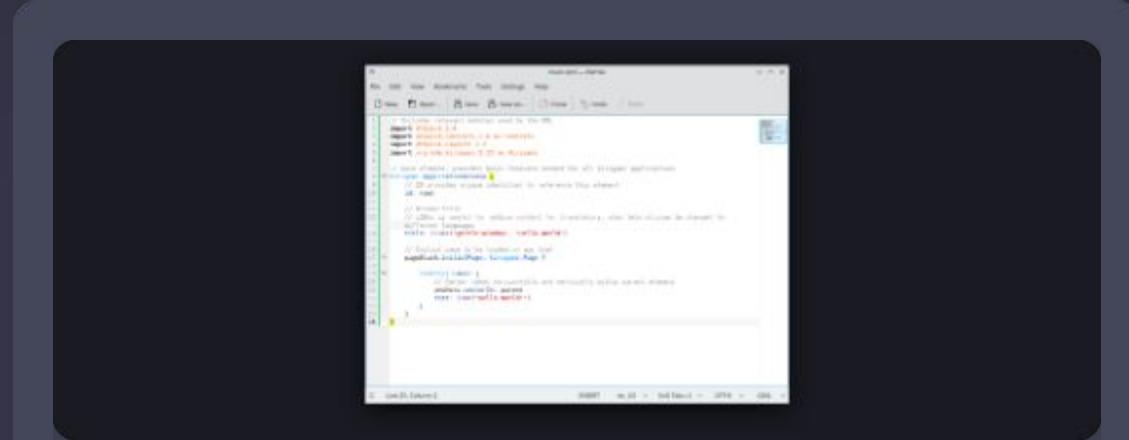

# Notes Stack

## Obsidian

Markdown-based second brain with graph view. This presentation for example was initially planned in Obsidian.

It has all the plugins the world... I mean, just install it, you will see...

## KWrite

KDE-native text editor, instant startup for quick config edits for example... It's like Windows Notepad, before it got shittified.

# 5. Creative Tools

---

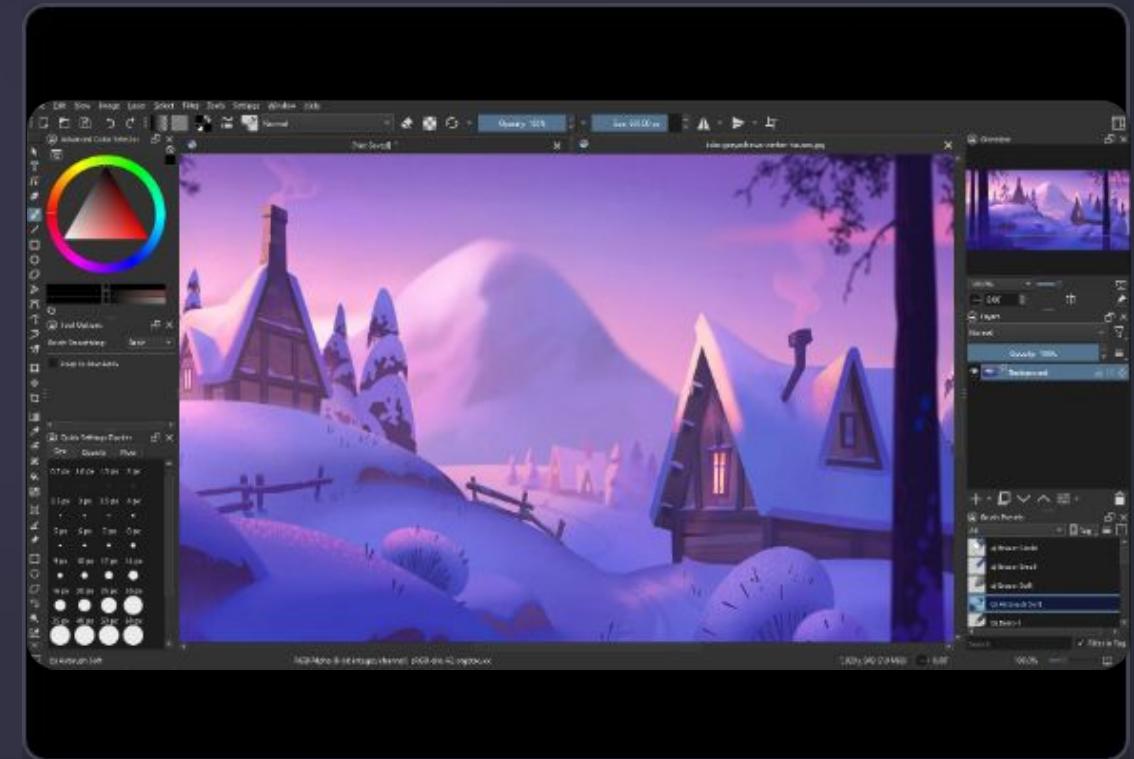

Design, Paint, Create.

# Krita

---

## Digital Painting-Your Coreldraw Alternative

- > **Artist First:** Designed specifically for illustration.
- > **Brush Engine:** Best-in-class tablet support.

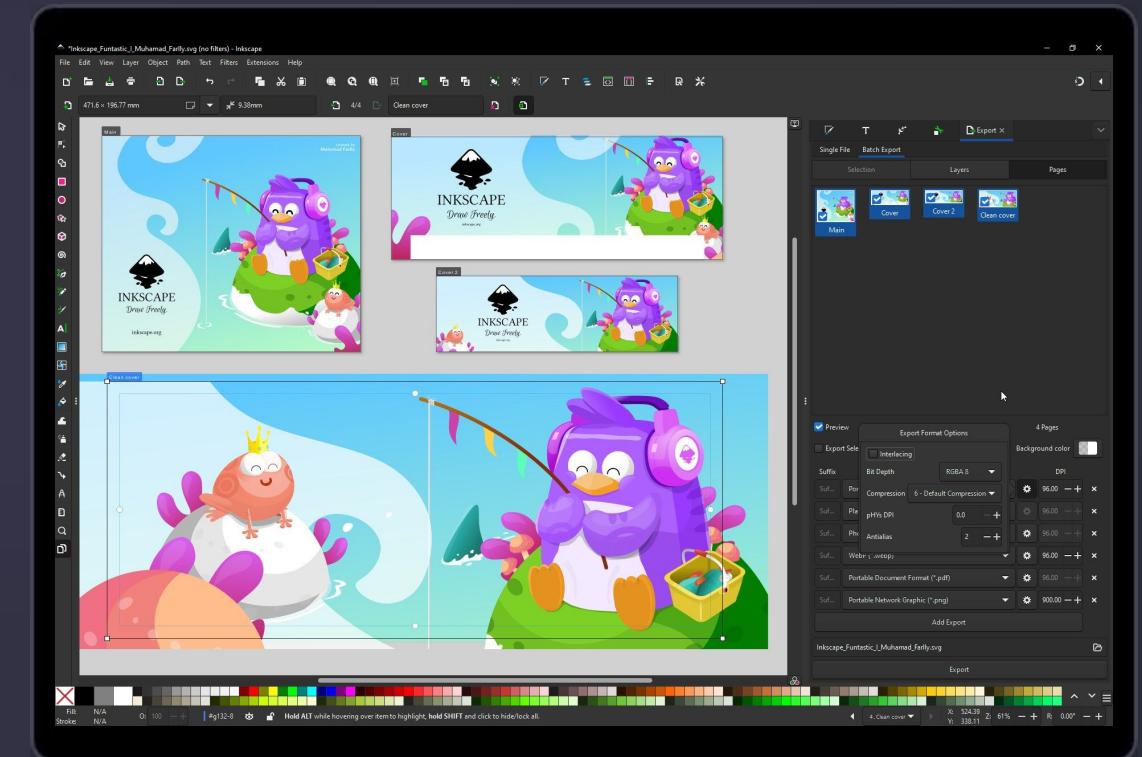

# Inkscape

---

## Vector Design

- > **SVG Native:** Perfect for logos, icons, and diagrams.
- > **Precision:** Powerful node editing tools.
- > **Alternative to:** Adobe Illustrator.

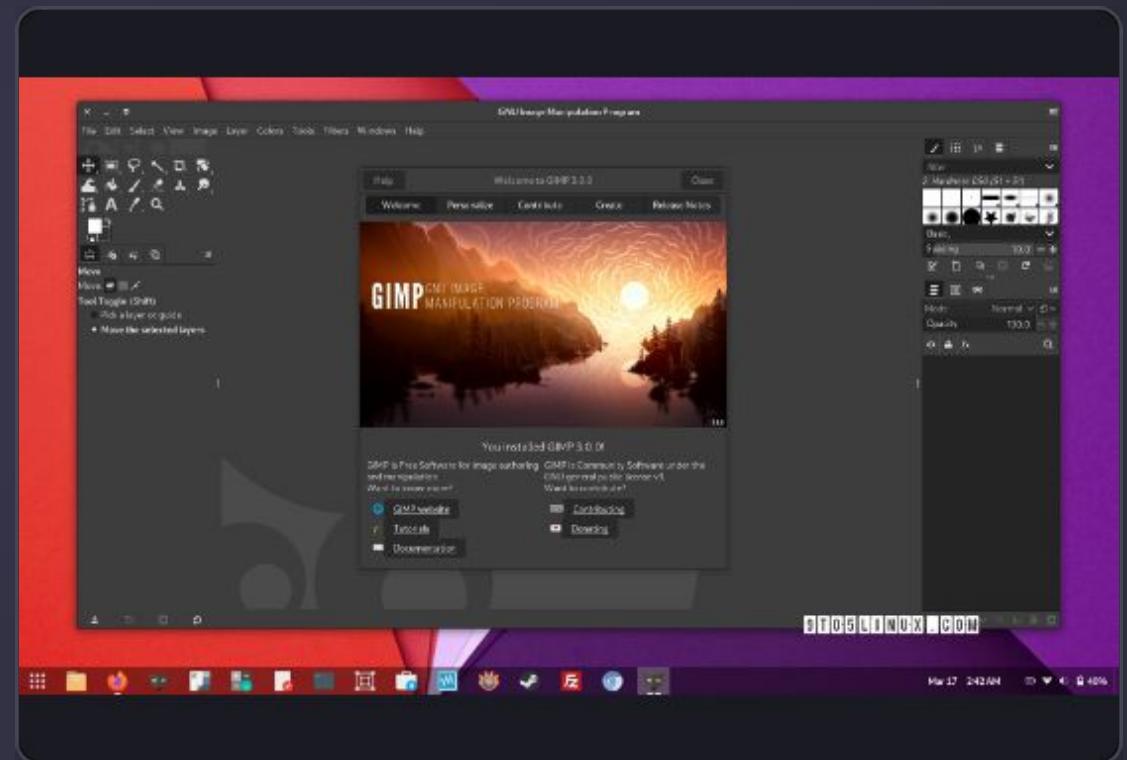

# GIMP

---

## Photo Manipulation

- > **Powerful:** The open source answer to Photoshop.
- > **Extensible:** Massive library of plugins. Still as not head to head winner as Krita, but beats Photoshop in that it's completely free...

# Photography Workflow

**digiKam**

Professional photo management and tagging.

**Darktable**

Non-destructive RAW editing and color grading.

# 6. Audio & Video

---

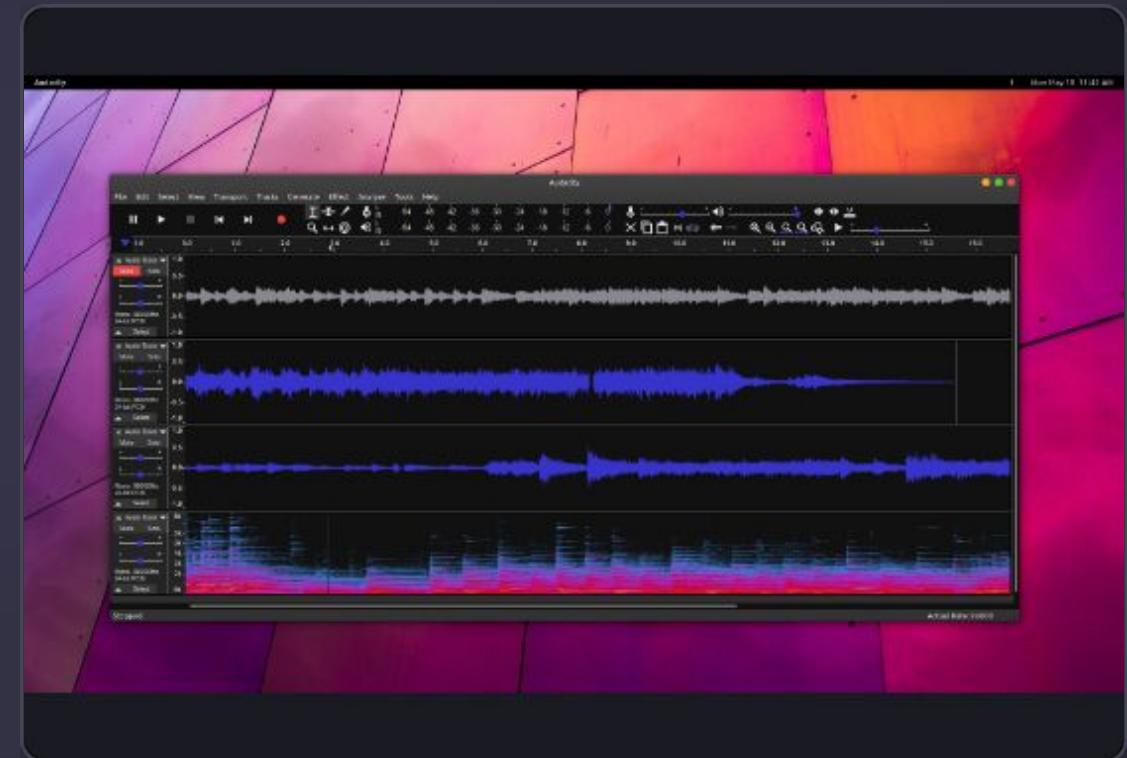

Production Studio.

# Audacity

---

## Audio Editor

- > **Simple:** Classic waveform editor.
- > **Podcasts:** Great for voice cleanup and cutting.
- > **Plugins:** Extensive effect library.

# MuseScore

## Music Composition

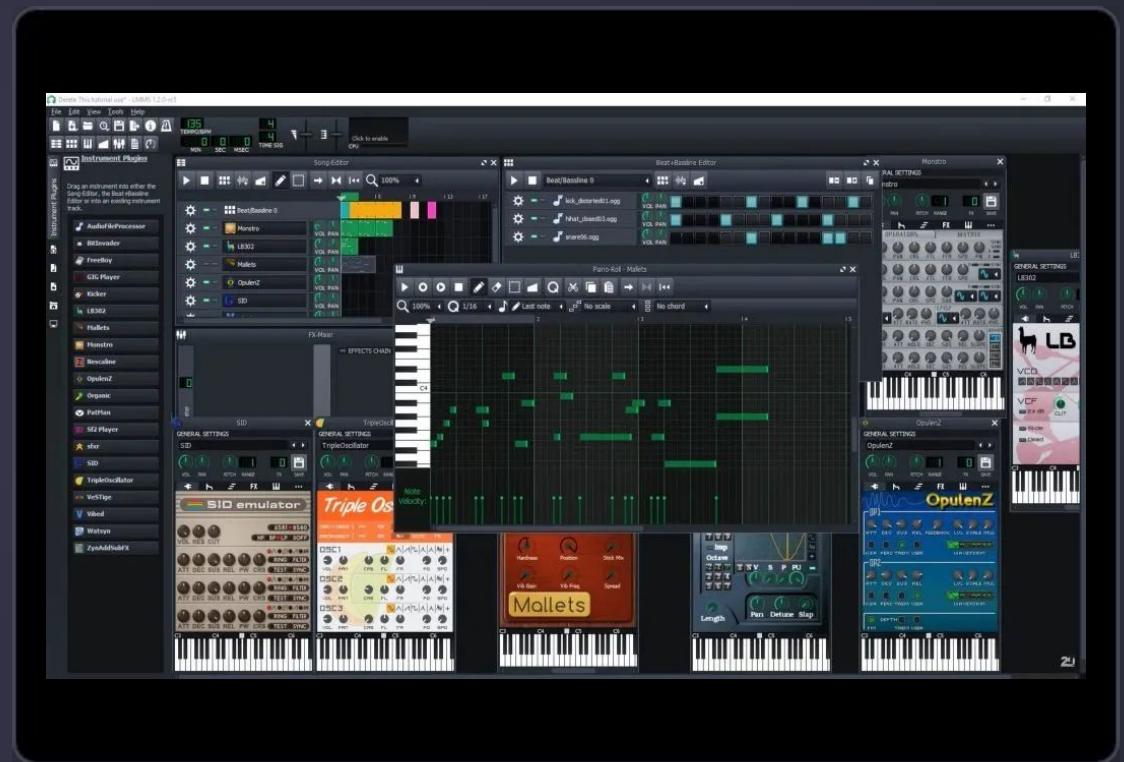

- > **Notation:** Professional sheet music creation.
- > **Playback:** Realistic instrument preview.
- > **Alternative to:** Sibelius.

# LMMS

## Digital Audio Workstation

- > **Production:** Beat making and MIDI composition.
- > **Included:** Comes with synths and samples.
- > **Alternative to:** FL Studio.

# OBS Studio

## Streaming & Recording

- > **Standard:** The industry standard for streamers.
- > **Scenes:** Complex scene composition.
- > **Performance:** Low overhead capture.

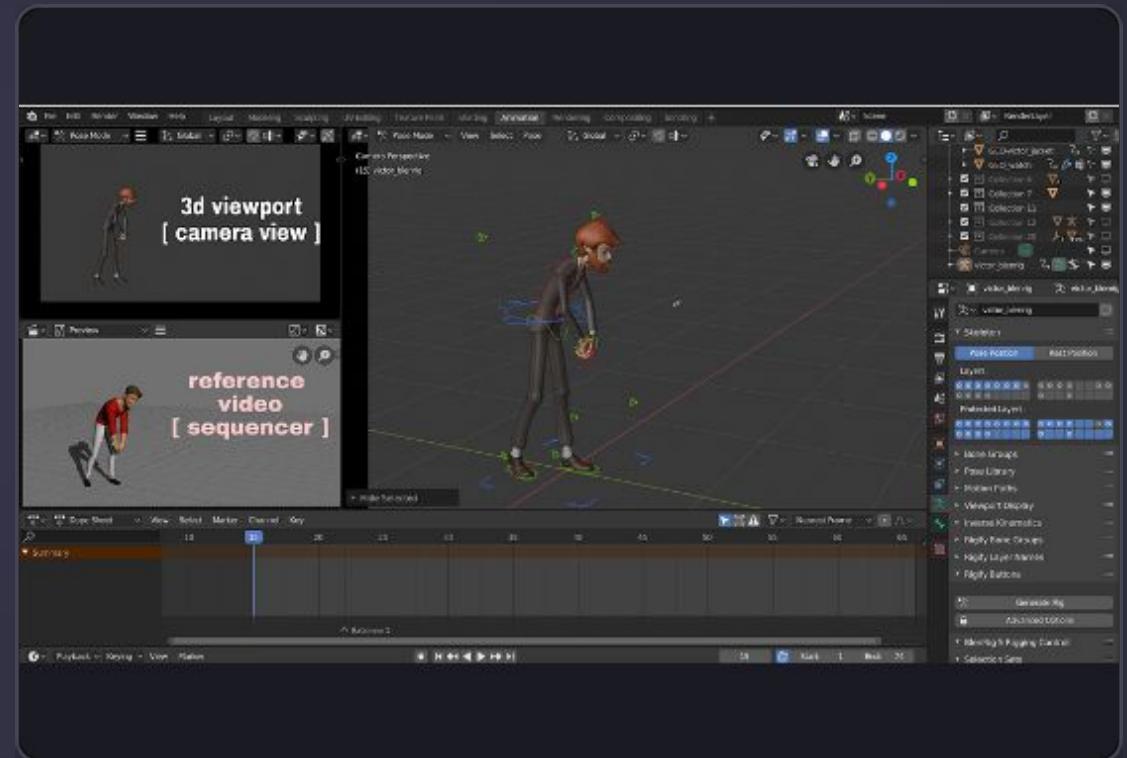

# Blender

---

## 3D Creation Suite

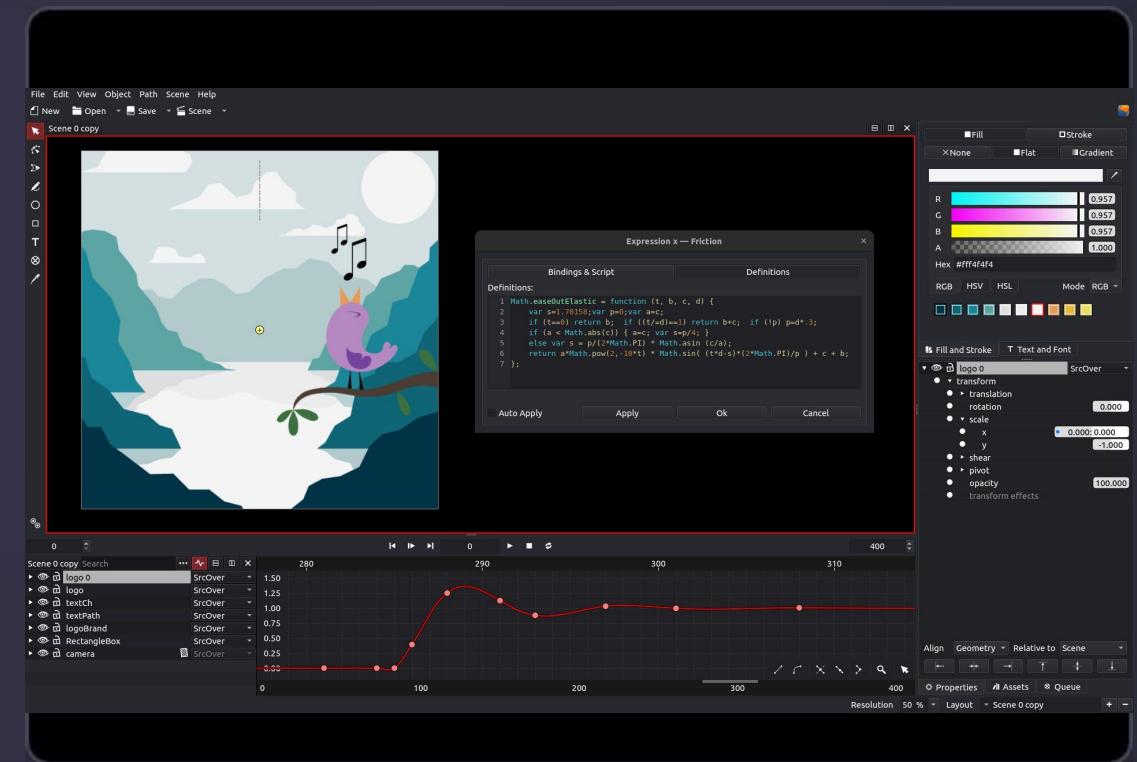

- > **Everything:** Modeling, rigging, animation, simulation, rendering, compositing.
- > **Pro Grade:** Used in major film and game productions.

# Friction

## 2D Motion Graphics & Vector Animation

- > **Studio:** Used by Studio Ghibli.
- > **Workflow:** Animate a logo or a character? It's got you covered
- > **Alternative to:** Adobe After Effects. Not as heavy or full featured... but does its core job better.

# OpenToonz

---

## 2D Animation

- > **Studio:** Used by Studio Ghibli.
- > **Workflow:** Traditional frame-based animation.
- > **Alternative to:** Toon Boom.

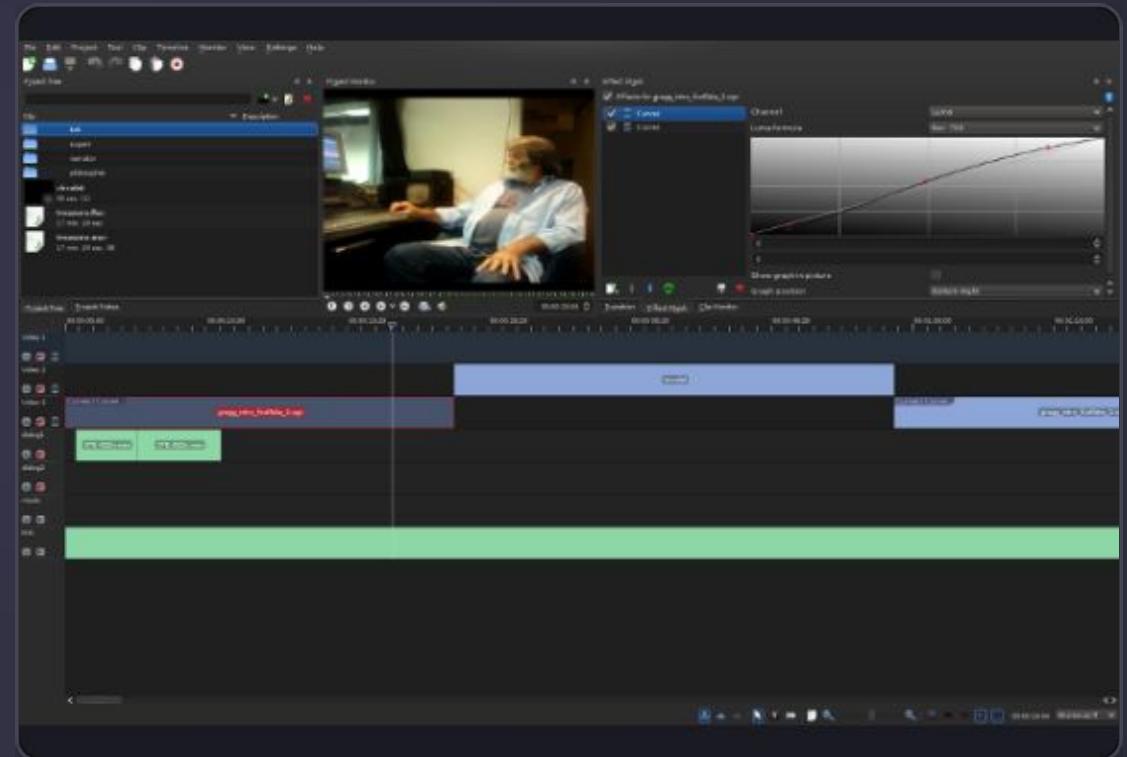

# Kdenlive

---

## Video Editing

- > **Multi-track:** Professional timeline workflow.
- > **Proxy:** Smooth editing for 4K footage.
- > **Alternative to:** Premiere Pro with a little less capacity. If you want a complete alternative with an even better workflow, try Davinci Resolve (but I haven't used it)...

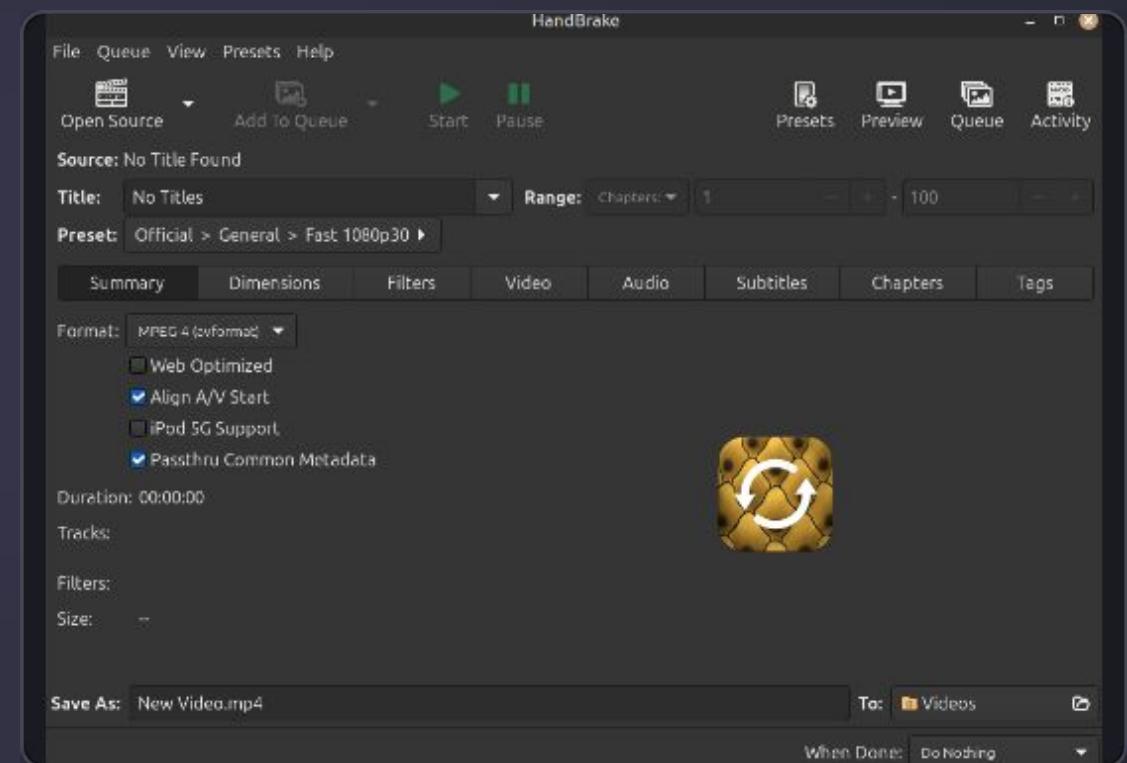

# HandBrake

---

## Video Transcoder

- > **Convert:** Compress video for web or devices.
- > **Presets:** One-click settings for any screen.
- > **Reliable:** It just works.

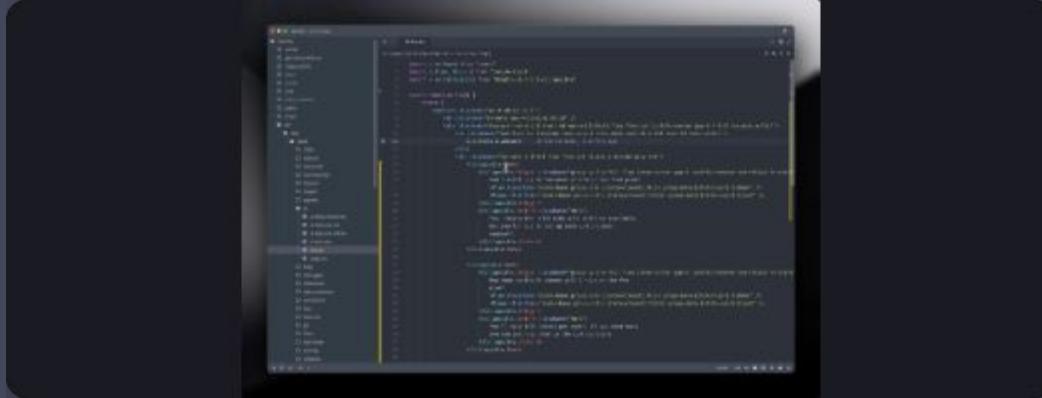

# 7. Dev & Infrastructure

---

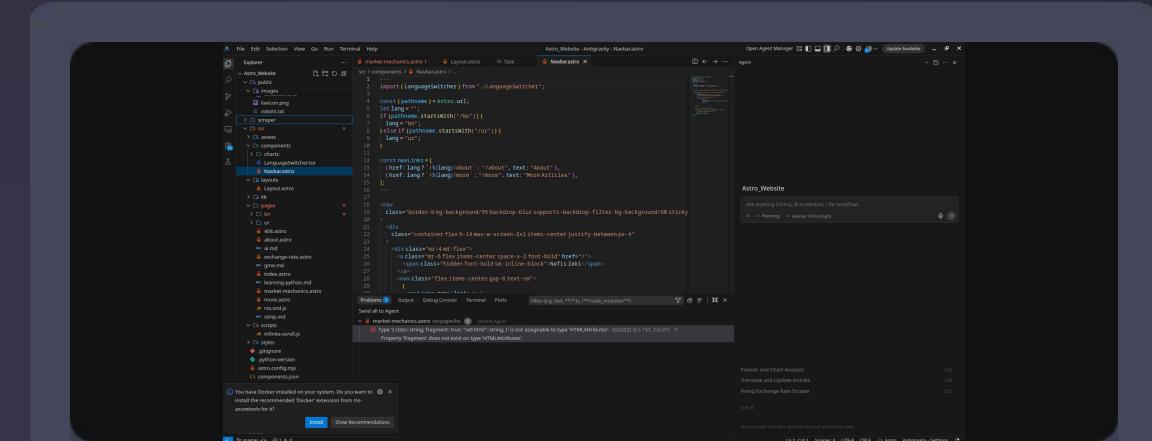

Backend power.

# Next-Gen Coding

## Zed

High-performance, collaborative editor from the creators of Atom.

## Antigravity

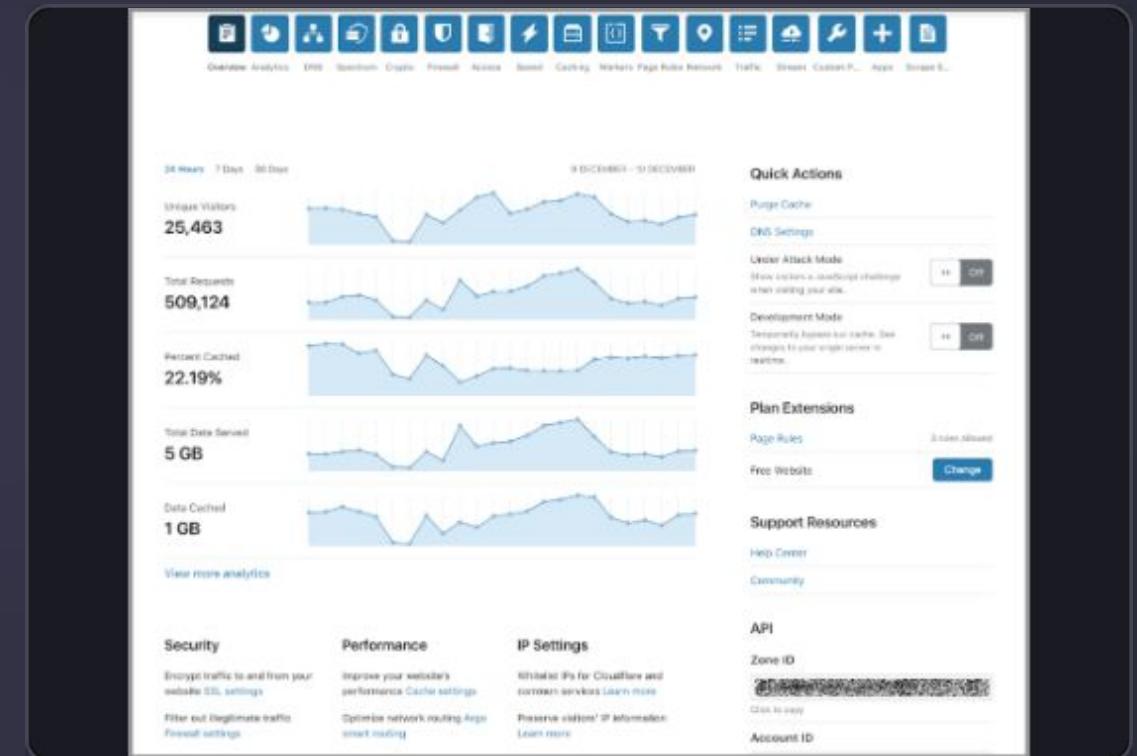

AI-first workflows for modern development & programming landscape.

I like both a lot

# Cloudflare & VPN

## Web Infrastructure

- > **Network:** DNS, CDN, VPN and security for your projects.
- > **Self-Hosting:** Essential for exposing local apps safely.

# Podman Desktop

## Container GUI

- > **Secure:** Rootless containers by default.
- > **Manager:** Handle images, pods, and volumes easily.
- > **Alternative to:** Docker Desktop.

# DBeaver

## Database Manager

- > **Universal:** SQL, PostgreSQL, MySQL, SQLite.
- > **Visual:** Clean UI for queries and schema visualization.
- > **Alternative to:** DataGrip.

The screenshot displays the DBeaver application window. On the left, the Database Navigator shows a tree structure of databases, tables, and views. The 'Customer' table under the 'Chinook' database is selected. On the right, a large Data Grid pane shows the contents of the 'Customer' table. The grid has columns for Address, City, State, Country, Name, Label, Type, and MetaData. A specific row for Berlin is highlighted with a yellow background. The status bar at the bottom indicates '60 rows(1 fetched - 0ms)'. The top menu bar includes 'File', 'Edit', 'View', 'Tools', 'Help', and tabs for 'category', 'metadata', 'Integrations', 'SQLite - Chira...', 'get\_customer\_id...', 'Rewards\_report...', and 'Customer'.

# 8. Internet & Finance

---

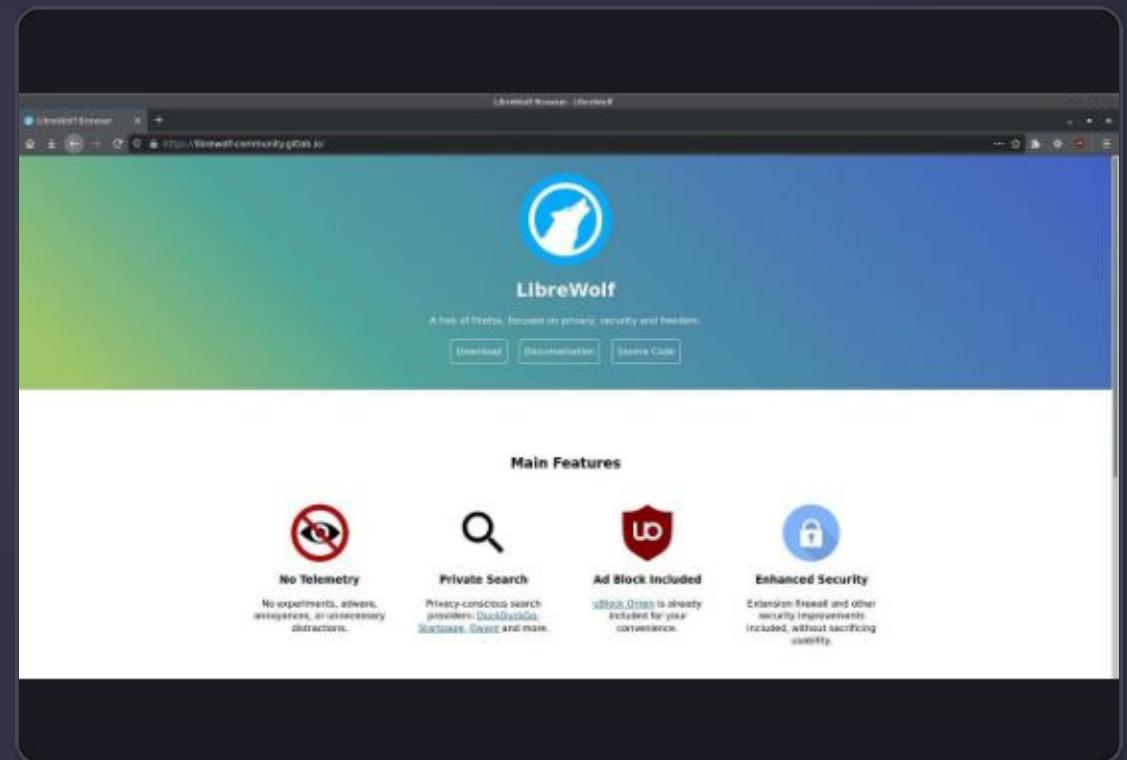

Daily Drivers.

# LibreWolf

---

## Hardened Browser

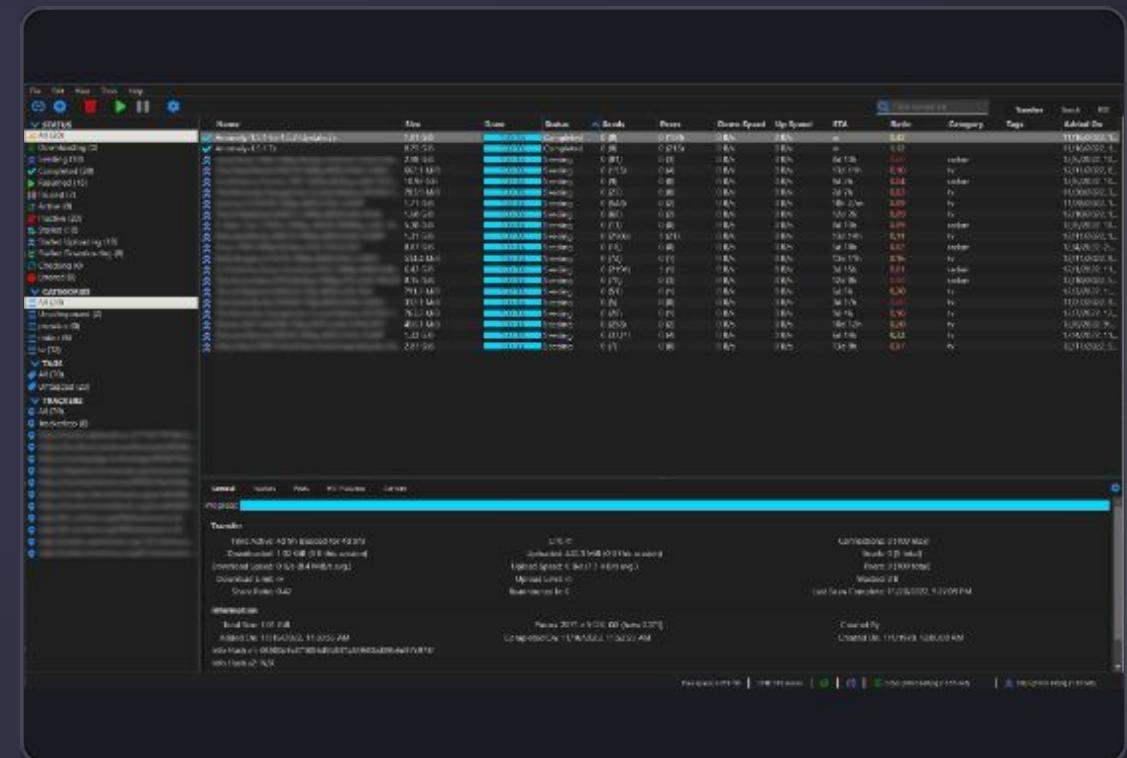

- > **Privacy:** Firefox fork with no telemetry.
- > **Security:** uBlock Origin pre-installed.
- > **Clean:** No "pocket" or sponsored shortcuts.

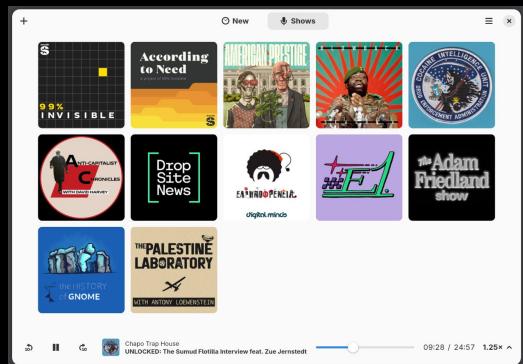

# qBittorrent

## File Sharing

- > **Clean:** No ads, no crypto miners.
- > **Features:** Search engine and RSS support built-in.
- > **Alternative to:** uTorrent.

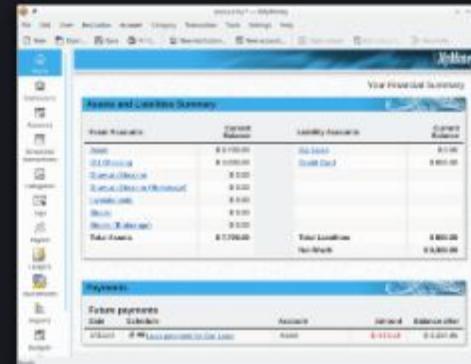

# Media & Money

## Podcasts

Gnome podcast client. Simply works superb.

## KMyMoney

Double-entry accounting. The "Quicken" for Linux.

As you can see, I don't care about consistency in looks,  
I only care about what functions better... for me.

Happy Distro Hopping!
